

Water Outage Response

- Fort Hood privatized water and wastewater in 2009.
- On 12 July, a contractor working near Belton Lake accidentally broke the 48" water main that provides water to Fort Hood and other Central Texas communities.
- During the ensuing outage, Adam (DPW Engineering) and AJ (American Water) led the Fort Hood effort to manage the crisis, conserve limited water on hand, and deliver water to critical locations like the hospital.
- When the main was repaired, they successfully brought our water system back online in a safe and timely manner.
- Exemplary partnership, performance, and leadership during an extremely stressful time for Fort Hood.
